

STORY-PLANNING WORKSPACE

ArcForge

Turn scattered story ideas
into connected worlds.

WHO WE ARE

The team behind ArcForge

Jingyi He
Project Lead & Full-Stack
Engineer

Led team coordination, CI/CD deployment, global UI styling, responsive design, and application-wide polish.

Bingying Li
Full-Stack Engineer

Built the locations library, character REST APIs, and reusable overview components across the platform.

Adeline Greene
Frontend Engineer

Developed end-to-end scene management workflows, API extensions, and structured story-planning features.

Abdelrahman Mohamed
Full-Stack Engineer

Created core UI states, shared API request utilities, and backend routes for scene management.

Allen Ramirez
Backend Engineer

Designed the database structure, made reset commands, seed tools, locations, and scene REST routes, and scene-character relationships.

Salman Khan
Frontend Engineer

Built character creation, editing, and deletion interfaces to complete the character management workflow.

WHO WE BUILD FOR

Meet Nadia.

A novelist with 40 characters and
a story that keeps growing.

“Coming back after a break is
hard. There are so many notes to
hold.”

A writer from our survey

We build for Nadia.

THE PROBLEM

Disorganized notes quietly kill stories.

“Too many parts to think about and organize, with no guidance and a poor interface.”

A writer from our survey

Creators switch between apps around 1,200 times a day, and most of that time never reaches the page. Source:

[Harvard Business Review](#)

100% keep story notes in Google Docs or Word

67% forget which character knows what, and when

67% feel overwhelmed by too many documents and open tabs

INTRODUCING ARCFORGE

One structured workspace
that keeps the whole story
connected, so nothing lives
only in your head.

HOW IT WORKS

Core features

Character profiles

See every scene a character appears in, plus their role, goal, and what they know.

Scene manager

Add, edit, and filter scenes by mood, status, and timeline order.

Scene casting

Assign characters to a scene and describe each one's role in it.

Location library

Build reusable settings and connect scenes to where they happen.

Item tracker

Tie key items and clues to the exact scenes where they appear.

Progress overview

Watch completed scenes climb toward the finished story.

UNDER THE HOOD

Built on a relational model

Eight PostgreSQL tables, with join tables and a self-referencing web of characters.

WHO WE TALKED TO

The idea resonates with the people who would use it.

“Our writers sometimes had trouble keeping backstories consistent for character dialogue. Some of those details were only written down in giant spreadsheets of branching dialogue.”

Engineer, formerly on the Palia team

“Think of a web of characters, like a family tree that maps who relates to whom across the whole story.”

Pitch reviewer, Hack Your Summer

Feedback gathered through Hack Your Summer.

LIVE DEMO

Let us show you.

ArcForge is live. Scan the code and open it on your phone while we walk through it.

“You can't use up creativity.
The more you use, the more
you have.”

Maya Angelou

NEXT STEP

Visions for Future Development

- **Authentication & User Roles**
 - Add secure user authentication
 - Support roles such as project owner, editor, and viewer
 - Control who can create, update, or view project content
- **Faster Project Navigation**
 - Add project-specific navigation after a project is selected
 - Use tabs for Overview, Characters, Locations, Scenes, and other project content
 - Help users move between related pages without returning to the dashboard
- **Image Uploads**
 - Allow users to upload reference images for their story projects.
 - Add character portraits, location images, scene artwork, and project cover images.
 - Help users visualize and organize their story world.

Thank you.
